QuickBackup for Windows protects your valuable data from partial or total loss by automating backup tasks and allowing you to create quick (manual) backups in 3 easy steps without defining a task. Tasks can be automated and scheduled for daily, weekly or monthly operations. No user intervention is required after setting it up.

Experts and experienced network administrator will agree with us in that there is no safer way to create backups than avoiding compression algorithms of any nature and avoiding incremental backups as well. QuickBackup for Windows mirrored copies are the best safeties backups ever.

QuickBackup for Windows does not password protect nor compresses any data. There is no need to worry about saving storage space as hard disk drives now a day are incredibly cheap. QuickBackup for Windows creates usable mirrored copies of your valuable data. To restore, simply ... copy and paste. It can't be any easier than that.

Using QuickBackup for Windows you can easily back up to any local or network drive or other removable media (such as an external USB HDD or flash drive). QuickBackup for Windows is the best backup solution for server, desktop and laptop computers for your business as well as for personal use.

QuickBackup for Windows comes in one single edition for all types of computers; there is no need to purchase separate licenses for different machines as it occurs with other backup software

packages. There is no need to choose among different editions and you will never have to worry as per what edition best suits your needs. One program fits all operating system.

Better safer than sorry

What happens when your hard disk dies, will your business survive if you can't recover all of your important data? Data recovery is critical to the life of any business. What about all those precious photos, videos and songs of your children?

Start backing up with QuickBackup for Windows to avoid such a risk. QuickBackup for Windows creates dated backups for historical purposes. One backup does not overwrite another, ever! Even in the event that they were created on the same day.

Save Time and Money

You can easily define automatic unattended backups using QuickBackup for Windows's scheduling features. Create unattended backups daily, weekly, or monthly.

Universality

Although we do not recommend compressing your backup data, future versions of QuickBackup for Windows will create standard zip files to compress your data, making it compatible with any other backup software or zip utility in the market. Updates are provided free of charge always.

FREE Technical Support

As a QuickBackup for Windows user you are entitled to FREE customer support even if you are using the trial version. We also distribute free video tutorials, screenshots, PowerPoint presentations, and Free Backup Pluggings as well.

Intuitive Interface

The QuickBackup for Windows window allows you to easily define/run backup jobs called tasks. Switching between manual and automatic mode is simple. You can see all the files/folders that are in the backup job and the new files that are being stored at the time of execution. You can start QuickBackup for Windows at windows startup or minimize it to the taskbar.

Highly Configurable

QuickBackup for Windows offers you only one backup type to choose from: Normal Backup ... that is it! No need to worry about full backups, differential backups, incremental backups, mirrored backups, and who knows what other types of backups you are being offered with other software packages. If you have experience backing up your data, you probably had discovered that after a day or two you will completely forget what type of backup you made such a day. In other words, your precious whatever-name-backup you've made just two days ago becomes obsolete.

Easy File and Folder Selection

You can browse a folder tree to select the folders as source of the backup, there is no need to include or exclude them individually. Multiple folders can be added as Sources at once.

Email notifications (Not enabled on version 2.x)

You can configure QuickBackup for Windows to send custom emails after a backup finishes. Email reports for success, error and warning notifications. Additional options allow you to attach the backup log file and send the email to several addresses.

Standard Zip Compression (Not enabled on version 2.x)

QuickBackup for Windows creates standard zip files. This format is compatible with any zip utility currently available on the market.
